

Time and money. Save both. And fix it right.

Global's UH-1 Fin Spar Repair Kit

There's a reason Global has the number one selling Fin Spar Repair Kit. In fact, our customers - from the U.S. Army and State Department to commercial operators in the U.S. and 13 foreign countries - know there are several very good reasons.

U.S. Army approved:

- Airworthiness release issued
- Eliminates x-ray inspections

FAA approved:

- STC's for UH1-B, E, F, H, P, HH-1K, TH-1L, and Bell 204B, Terminating Action for AD 99-25-12

Easy to install:

- No need to remove the tailboom
- Completed with typical structural repair tools
- Cold working of holes not required
- Additional nose ballast not required

Strong:

- Two solid aluminum spar caps, stronger than a 212/412 fin spar
- Stronger web between spar caps
- Better joint at the 90° fitting, eliminates cracking at the top end
- Better load distribution at the critical area where fin and tailboom intersect

Global's 100% technical support assures your structural repair technicians can install our spar kit in approximately 80 man hours. That minimizes downtime from the usual two-to-three-weeks to three or four days. And the price is right. Less than half the cost of other solutions.

*Fix it right. Fix it fast. Fix it smart.
